1 Gates 2 Pipeline 3 Citation 4 Effects view #34 / ledger #34 IN SYNC

GATES / 3 PASSED · 1 BLOCKED · 1 WAITING

API contract PASS
api@a17 · receipt #28

SDK decoder PASS
sdk@d02 · receipt #31

CLI build PASS
cli@c38 · receipt #32

Citation binding BLOCKED
sdk@d02 · C7 has two matches

Admit proposal WAITING
CP-12 · requires checked instance

SELECTED GATE / CITATION BINDING

Two spans match C7

SDK target sdk@d02

Historical C7 is exact at sdk@b91

WHY IT STOPPED

Both functions contain ‘return DEFAULT’.
The matching line alone cannot bind C7.

NEXT EVIDENCE

Inspect both spans and their owners.

CP-12 has no checked instance at this cut.

↑↓ select gate Enter inspect evidence 2 pipeline / filter

REVIEW The selected gate keeps its target revision, missing evidence and next step together.

Pipeline trace

OPENING VIEW B

The same run at event 34, arranged by dependency so the open branch is visible.

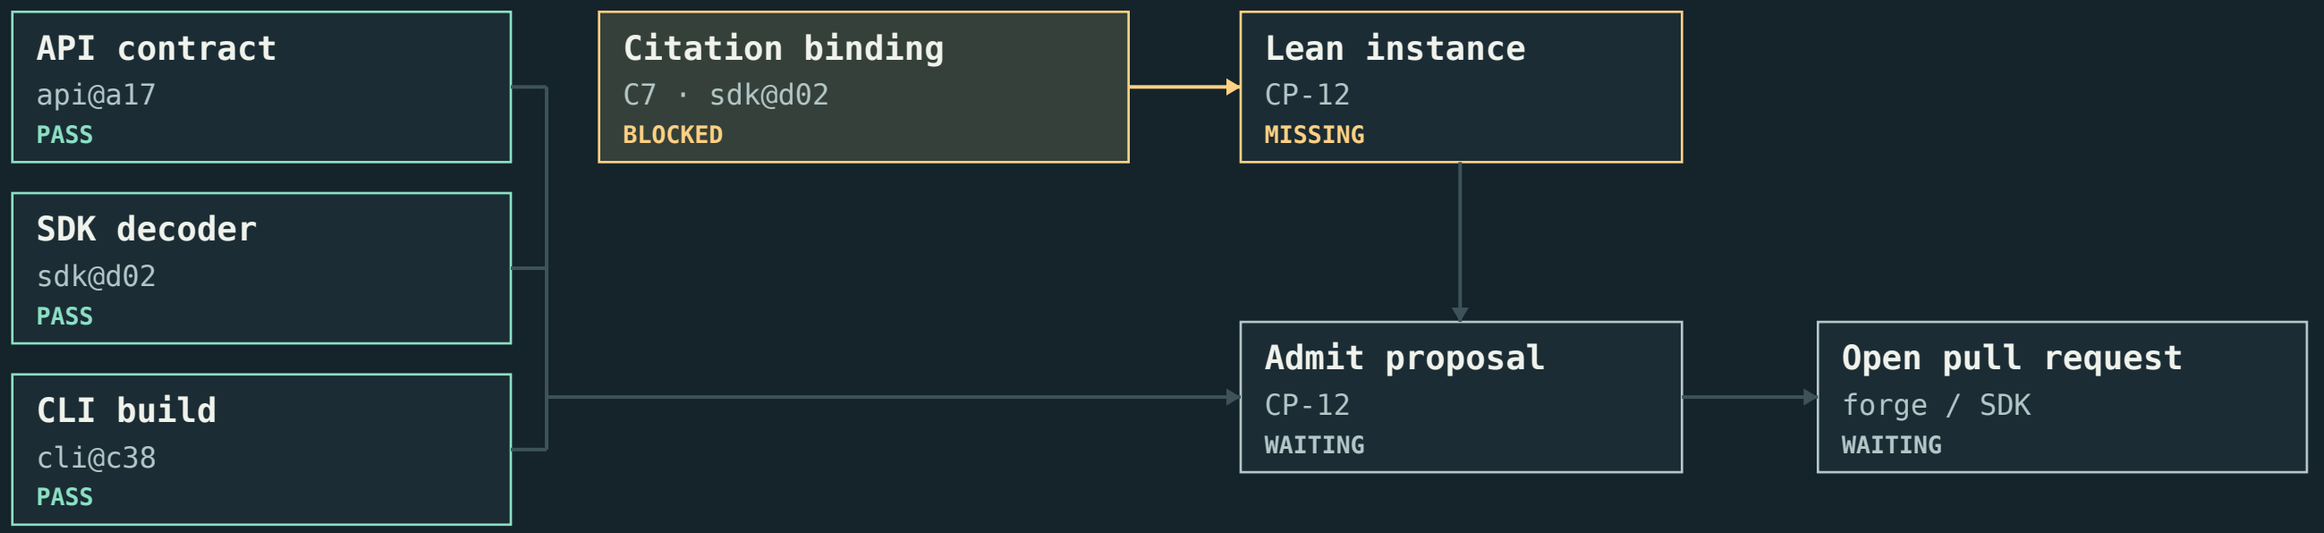

wf / run watch RUN-017 Cursor pagination across API, SDK and CLI READ ONLY

api@a17 sdk@d02 cli@c38 corpus R42 · author-change@p17

1 Gates 2 Pipeline 3 Citation 4 Effects view #34 / ledger #34 IN SYNC

DEPENDENCIES AT EVENT #34

Arrows point to dependent steps

Focus C7 cannot be rebound from line similarity. Open its evidence with Enter.

←→↑↓ select node Enter inspect receipt 1 gates / find

REVIEW Use this view when you need to tell which downstream operation a blocker holds up.

Citation inspector

DRILL-DOWN / EVIDENCE

What could a reviewer learn from two source spans without opening the entire file?

wf / run watch RUN-017 Cursor pagination across API, SDK and CLI READ ONLY

api@a17 sdk@d02 cli@c38 corpus R42 · author-change@p17

1 Gates 2 Pipeline **3 Citation** 4 Effects view #34 / ledger #34 IN SYNC

C7 / sdk / decoder.py CP-12 · requested use: current SDK binding

CITED REVISION / sdk@b91

EXACT AT ORIGINAL REVISION

```
1  def intended():
2      return DEFAULT
```

TARGET REVISION / sdk@d02

AMBIGUOUS · 2 TEXT MATCHES

```
1  def other():
2      return DEFAULT

4  def intended():
5      return DEFAULT
```

CP-12 stays blocked. A fresh observation can support a separate proposal.

For a successor binding, supply an independent correspondence witness.

↑↓ inspect match Tab change pane Esc back to gate

REVIEW Both candidates stay visible. The same source text occurs under two different owners.

When the reply goes missing

RECOVERY / BEFORE RECONCILIATION

Later in RUN-017, Writfold has a durable dispatch claim but no answer from the forge.

wf / run watch RUN-017 Cursor pagination across API, SDK and CLI READ ONLY

api@a17 sdk@d02 cli@c38 corpus R43 · author-change@p17

#47 CP-13 admitted
Corpus R43 · CP-12 remains unadmitted

#50 Dispatch claimed
FX09 / attempt 1 · before forge I/O

#51 Forge response lost
Caller has no outcome

#52 **Outcome unknown**
Await independent observation

SELECTED EFFECT / FX09

PR outcome unknown

OpenPullRequest · SDK · sdk@d02

WHAT THE LEDGER SUPPORTS

One dispatch claim. No result receipt.

The PR may already exist.

WHAT RESOLVES IT

Look up FX09 at the forge.

Keep its reservation. Hold redispatch.

↑↓ select event Enter inspect receipt [ ] browse cuts g jump to observed head

REVIEW The view is two events behind. It can establish uncertainty at #52, even if newer evidence exists.

Confirming the PR by lookup

RECOVERY / AFTER RECONCILIATION

An independent lookup resolves the same effect. The view shows exactly what it confirms.

wf / run watch RUN-017 Cursor pagination across API, SDK and CLI READ ONLY
